

Paintable Range Components

Painting & finishing Instructions

BWP001

This leaflet gives information on how to paint kitchen doors & range components to provide a unique kitchen colour and style.

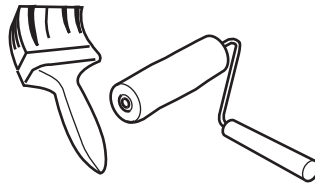

Tools & Products Required

Eye Protection

Face Mask

Brush or Roller

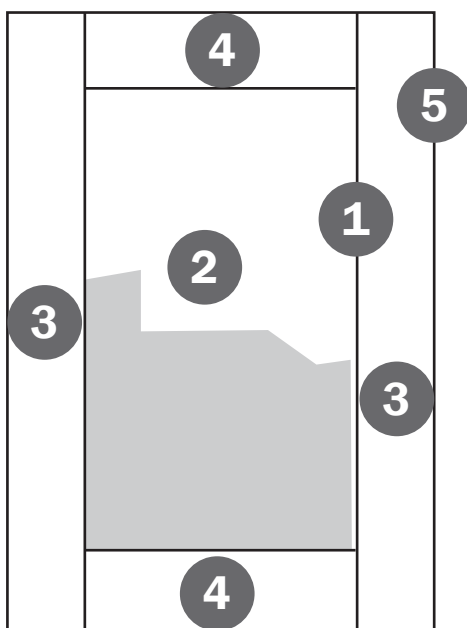

Paint

Scotch-Brite Cloth
(or fine sandpaper)

Painting & Finishing

- For best results we recommend **solvent based paints** are used, as these are the most hardwearing and durable with the number of coats and **drying times dependant on the paint used.**
- We recommend doors are not fitted to cabinets during the painting process and are laid flat.
- Lightly sand each component prior to painting.
- Paint can be applied using either a brush or a roller. A roller will give the best results on flat surfaces.
- Follow the sequence below for each frontal to ensure consistency.
- Once dried, lightly sand the product in between coats.
- Two coats are recommended, although additional coats can be applied to achieve the desired finish.
- Ensure the first coat is completely dry before applying the second coat.

Door painting sequence to achieve best results

- 1 Internal edge profiles
- 2 Centre panel
- 3 Vertical rails
- 4 Horizontal rails
- 5 Edges
